Bio-Ready Anti-Aging Formula

Next to water, collagen is the most abundant substance in your body, almost 30% by volume. Collagen is the most common protein in the human body and it is critical to overall health. This specific protein has a profound rejuvenating potential for those over 30 years of age whose natural collagen is diminished.

Collagen is a fibrous protein found everywhere in your body: skin, hair, nails, muscles, bone, and connective tissue. As collagen decreases the body shows more pronounced signs of aging. Experts agree that the natural aging process seems to be accelerated with the loss of collagen.
